COCO - AWMT-230 MINI BUILD-IN TRANSMITTER

When you use the wired light switch to turn on/off the lights, the mini transmitter will also send an on/off signal to one or more COCO receivers. The AWMT-230 can only be used with standard light switches. It cannot be used with a pulse switch, multi-way switch or a (slide) dimmer.

The mini build-in transmitter (AWMT-230) is a unique product, especially designed to install behind an existing, working light switch. You can keep using the light switch to switch the connected lights on/off. However, by installing the AWMT-230 you can also simultaneously control one or more COCO receivers wirelessly. This means you can turn on/off several lights at once with the single press of a button, without complicated wiring and installation. The AWMT-230 is compatible with all COCO receivers with the automatic code system. This transmitter sends radio signals at 433,92 Mhz. The signal passes through walls, windows and doors, with an indoor range up to 30 meters.

FEATURES

TECHNICAL SPECIFICATIONS

Model	AWMT-230
Memory addresses	
Code System	Automatic
Channels	2
Rf reception range	Indoors up to 30 meters (depending on local conditions)
